BIG DATA ANALYTICS

BIG DATA ANALYTICS

Big Data: It is a collection of data that is huge in volume.
& growing exponentially with time.

BIG DATA ANALYTICS

Big Data: It is a collection of data that is huge in volume.
& growing exponentially with time.

BIG DATA ANALYTICS

Big Data: It is a collection of data that is huge in volume.
* growing exponentially with time.
* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large datasets containing a variety of data types to uncover

BIG DATA ANALYTICS

Big Data: It is a collection of data that is huge in volume.
* growing exponentially with time.
* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large datasets containing a variety of data types to uncover

Big Data: It is a collection of data that is huge in volume.
* growing exponentially with time.
* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large datasets containing a variety of data types to uncover hidden patterns, unknown correlation making trends, customer preferences and other useful information.

Challanges:
* Insufficient understanding and acceptance of big data.

Big Data: It is a collection of data that is huge in volume.
* growing exponentially with time.
* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large datasets containing a variety of data types to uncover hidden patterns, unknown correlation making trends, customer preferences and other useful information.

Challanges:
* Insufficient understanding and acceptance of big data.

Big Data: It is a collection of data that is huge in volume.
* growing exponentially with time.
* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large datasets containing a variety of data types to uncover hidden patterns, unknown correlation making trends, customer preferences and other useful information.

Challanges:

- Insufficient understanding and acceptance of big data.
- Confusion while Big data tools selection.
- Paying loads of money.

Big Data: It is a collection of data that is huge in volume.
* growing exponentially with time.
* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large data sets containing a variety of data types to uncover hidden patterns, unknown correlation making trends, customer preferences and other useful information.

Challanges:

* Insufficient understanding and acceptance of big data.
* Confusion while Big data tools selection.
* Paying loads of money.

* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics:
process of examining large datasets containing a variety of data types to uncover hidden patters, unknown correlation making trends, customer preferences and other useful information.

Challanges:

- Insufficient understanding and acceptance of big data.
- Confusion while Big data tools selection.
- Paying loads of money.
- Data integration
- Data security.
  other
Some challenges

* None of traditional data management tools can store it or process it efficiently.

Big Data Analytics: process of examining large datasets containing a variety of data types to uncover hidden patterns, unknown correlation making trends, customer preferences and other useful information.

Challanges:

- insufficient understanding and acceptance of big data.
- Confusion while Big data tools selection.
- Paying loads of money.
- Data integration
- Data security.

Some other challenges Capture, Storage, Analysis
